

## The way to clean optical lens

As we know, the optical lens is important to the image quality, in order to protect the lens, we should use special tools to clean the optical lens.

1 brush: this thing I have not used, some say, some people say that can not be. Why can't the brush itself is easy to absorb dust, even keeping good, also to avoid the dust brush down not harboring the last on the lens, easy to spoil the lens. I estimated using the brush, only with a brush gently put the dust on the lens to pick up, but not a lot of really brush. Out after the best balloon blew the best.

2 The lens paper is some reproach, I pour is often used, but there has never been a problem. The lens paper folded into a roll, and then torn from the middle section of this method with hairy more for removal of slight stains. If you want to clean, but also to spread the lens paper, single wipe. Dry cleaning is the most easy to damage the lens; I usually ha gas, the most suitable moist degree. But some people say that the acidic components in saliva can have damaging effects on the coating, the only solution will be to gargle, do not laugh, ha ha gas if even the saliva are ha on the lens, it only shows that the technology does not pass: -)) with the hand in front of the camera lens cleaning paper also must use soap to handle the clean, do not leave a stain, especially the body's natural oils secreted.

3 pure alcohol and pure cotton yarn, lens cleaning solution I've seen the formula is: 2:1 = ethyl alcohol. Configure some, tested in a hybrid MC ZOOM family, is very clean, and do not damage the coating. The trick is to rub outward from the center of the oil, ether dissolved speed is very fast, if not to dissolve the grease ether rub the lens ring, it will leave oil film an ether volatilized, had to use lens paper processing. Because the boiling point ether only less than 50 degrees, so that the cleaning liquid even sealing, over the summer is also the best reconfiguration, can have a look, as long as the volume is small, it needs to be matched.

4 About of denatured alcohol etc. There has been some magazine article said that we must avoid using denatured alcohol, and some seem to say must use denatured alcohol, no degeneration is not good. But up to now I do not know what is denatured alcohol.
